In “Hospital Readmissions After Laboratory-Confirmed Influenza Hospitalization” by Dobrzynski et al [J Infec Dis 2020; jiaa117], Figure 2B had incorrect values for the proportion readmitted from Time from Index Hospitalization. These values have been re-labeled and the solid black line was graphed accordingly in the published version. Additionally, Figure 2B was incorrectly referenced after “Patients aged 65 years and older accounted for 1380 total readmissions, 215 of which occurred within 30 days among 188 patients (6%) (Figure 2B),” which was removed in the published version. The authors regret these errors.

In “A Randomized Clinical Trial to Compare Plasmodium falciparum Gametocytemia and Infectivity After Blood-Stage or Mosquito Bite–Induced Controlled Malaria Infection” by Alkema et al [J Infect Dis 2020; jia157], data points for MB Inoculations and IBSM were erroneously reversed for the variable: Individuals infectious to mosquitoes, % (no./total) in Table 2. This has been corrected in the article, and the authors regret the error.
